

And look at this beautiful code

```
% Here is some code
\setcounter{secnumdepth}{1}
\begin{document}
  \section{My section (and Hi!)}

  \unknowncommand\knowncommand
  \inAccA\inAccB\inAccC
  \section  $\sqrt{2}$   $\leftarrow$  cool!

  Insert literal tildes like ~. Hi!
\end{document}
```

with some text after it.

Let's also show square brackets:

```
% File: document.tex
\documentclass[a4paper]{article}
\usepackage{amsmath}

\begin{document}
  Insert math like  $\sqrt{2}$ $.
  \inAccA\inAccB\inAccC

\end{document}
```

The first line was of the form `\documentclass[]{}.` Very interesting. Note the $\$$ are only green because we defined it as a keyword.
