And look at this beautiful code

```
% Here is some code
\setcounter{secnumdepth}{1}
\begin{document}
  \section{My section (and Hi!)}

\unknowncommand\knowncommand
  \inAccA\inAccB\inAccC
  \section \sqrt{2} \to cool!

Insert literal tildes like ~. Hi!
\end{document}
```

with some text after it.

Let's also show square brackets:

```
% File: document.tex
\documentclass[a4paper]{article}
\usepackage{amsmath}

\begin{document}
   Insert math like $\sqrt{2}$.
\inAccA\inAccB\inAccC
\end{document}
```

The first line was of the form \documentclass[]{}. Very interesting. Note the \$ are only green because we defined it as a keyword.
