For this, change the maximal number depth

```
% Here is some code
\setcounter{secnumdepth}{1}
\begin{document}
  \section{With number (depth 1)}

  \setcounter{secnumdepth}{0}
  \section{No number}
  \unknowncommand\knowncommand
  \inAccB\inAccC\inAccD
  \section √2 ← sneaky!
\end{document}
```

and some text after it.

Let's also show square brackets:

```
% File: document.tex
\documentclass[a4paper]{article}
\usepackage{amsmath}

\begin{document}
  Insert math like $\sqrt{2}$.

\end{document}
```

We can also have code inline, like \thesection, or \author{you}.
