And look at this beautiful code

```latex
% Here is some code
\setcounter{secnumdepth}{1}
\begin{document}
    \section{My section (and Hi!)}

    \unknowncommand\knowncommand
    \inAccA\inAccB\inAccC
    \section  √2 ← cool!

    Insert literal tildes like ~. Hi!
\end{document}
```

with some text after it.

Let's also show square brackets:

```latex
% File: document.tex
\documentclass[a4paper]{article}
\usepackage{amsmath}

\begin{document}
    Insert math like $\sqrt{2}$.
    \inAccA\inAccB\inAccC

\end{document}
```

The first line was of the form `\documentclass[]{}`. Very interesting. Note the $ are only green because we defined it as a keyword.
